DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- 1. Claims 1-21, drawn to a test for the analysis of one or more analytes in a fluid test sample, classified in class 422, subclass 82.05, for example.
- II. Claim 22, drawn to a test for the analysis of an analyte in urine, classified in class 435, subclass 287.2, for example.
- III. Claims 23-26, drawn to an automated method of reading a test for the analysis of one or more analyte(s) in a liquid test sample, classified in class 436, subclass 518, for example.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-III are independent and patentably distinct. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04. MPEP § 808.01). In the instant case the product of Group I includes a carrier of an absorbent material and the carrier exhibiting light reflectance within a first predetermined spectral range, which is not required by the product of Group II. The product of Group II includes an elongated carrier of an absorbent material, which allows an analyte and labeled antibodies specific thereto to flow through it along with urine and Application/Control Number: 10/767,693

Art Unit: 1641

to form analyte/labeled antibody conjugates, which is not required by the product of Group I. Therefore, the products of Groups I and II have different modes of operation.

Inventions I-II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a materially different process. For example, the products of Groups I-II can be used with a scanning probe microscope to detect analytes in a fluid test sample.

Because these inventions are distinct for the reasons given above, have acquired a separate status in the art because of their recognized divergent subject matter, searches for one group are not required for the others, restriction for examination purposes as indicated is proper.

A telephone call was made to Mr. Sampson on June 21, 2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1641

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Unsu Jung whose telephone number is 571-272-8506. The examiner can normally be reached on M-F: 9-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Long Le can be reached on 571-272-0823. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
